Mission / Bio

Aspiring forensic scientist with a strong passion for criminal justice and crime scene investigation. Dedicated high school senior seeking scholarship opportunities to pursue an undergraduate degree in forensic science. Interested in DNA analysis, crime scene investigation, and forensic pathology. Strong academic record with focus on biology, chemistry, and science courses. Committed to making a positive impact in the criminal justice system through scientific investigation and evidence analysis. Multilingual student leader with extensive community service experience, serving as president of Crochet and Sign Language Clubs and section leader in marching band.

Primary Goals

One of my primary goals is to secure a scholarship that will allow me to pursue an undergraduate degree in forensic science. I plan to apply for at least three significant scholarship opportunities by the end of the school year. By doing so, I aim to alleviate the financial burden of college and focus on my studies in DNA analysis, crime scene investigation, and forensic pathology.

Additionally, I intend to maintain my strong academic record by achieving a GPA of 3.8 or higher throughout my senior year, particularly in my biology and chemistry courses. This goal will not only prepare me for a rigorous college curriculum but also deepen my understanding of the scientific principles essential for a successful career in forensic science.

Lastly, I aspire to enhance my involvement in community service by contributing at least 50 volunteer hours to local organizations that support criminal justice initiatives before I graduate. This commitment will help me develop practical skills, build connections, and positively impact the community while furthering my passion for crime scene investigation.

Target Population / Background

My name is Anastasia White, and I am a dedicated high school senior from Cleveland, TN, with a strong aspiration to become a forensic scientist. My passion for criminal justice and crime scene investigation has shaped my academic journey, where I focus on biology, chemistry, and science courses. I thrive in these subjects, maintaining a GPA of 3.81, and I am committed to achieving academic excellence as I prepare for the rigorous demands of college.

As a multilingual student and a second-generation immigrant, I embrace my diverse background and leverage my experiences to connect with others in my community. My role as president of the Crochet and Sign Language Clubs has not only allowed me to develop leadership skills but also to advocate for underserved students. I am dedicated to making a positive impact through community service, and I aim to contribute at least 50 volunteer hours to local organizations focused on criminal justice initiatives before I graduate. I believe that through scientific investigation and evidence analysis, I can help make a difference in the criminal justice system.

Geographic Focus

I live in Cleveland, TN, a community that has shaped my aspirations and commitment to forensic science. This area offers a unique backdrop for my interest in criminal justice, and I find inspiration in the local efforts to improve safety and accountability. I have become increasingly aware of the challenges facing the criminal justice system here, and I am eager to contribute positively to this field. My involvement in local nonprofit organizations allows me to connect with community members and understand the real-world implications of crime and justice in Cleveland.

As I pursue my goals in forensic science, I see the significance of addressing the specific needs of my community. I aim to engage in projects that directly benefit local initiatives focused on crime prevention and education. By volunteering and working closely with organizations in my area, I can gain practical experience while making a meaningful impact. I am committed to utilizing my passion and skills to advocate for change within my community, ultimately leading to a safer and more just environment for all.

Funding Needs

As I prepare to pursue my undergraduate degree in forensic science, I have identified specific funding needs that will help me achieve my academic and professional goals. I estimate that I will require approximately \$20,000 for my first year of college, covering tuition, textbooks, and laboratory fees. Securing scholarships amounting to at least \$10,000 will alleviate some of this burden, allowing me to focus on my studies in DNA analysis and crime scene investigation without the stress of financial constraints.

Additionally, I plan to allocate around \$5,000 for essential materials and tools related to

my coursework, such as lab equipment and forensic science manuals. To enrich my learning experience, I aim to participate in workshops or seminars that require approximately \$2,000. These funds will enable me to gain hands-on experience and connect with professionals in the field, aligning with my commitment to positively impact the criminal justice system through scientific investigation. By addressing these funding needs, I believe I can successfully navigate my educational journey and make meaningful contributions to my community.

Timeline

To achieve my goal of securing a scholarship and pursuing an undergraduate degree in forensic science, I have devised a detailed timeline. By November 30, I plan to research and identify at least three significant scholarship opportunities that align with my aspirations in forensic science. I will dedicate my weekends to completing the necessary applications, aiming to submit them by January 15. This will provide me ample time to fine-tune my personal statements and ensure my academic achievements are effectively highlighted.

Additionally, I am committed to maintaining my GPA of 3.8 or higher throughout my senior year. By mid-term in March, I will assess my progress in biology and chemistry, identifying areas for improvement if needed. Finally, I aspire to complete at least 50 volunteer hours by April 30, actively seeking local organizations involved in criminal justice initiatives to immerse myself in meaningful community service. By graduation in May, I am hopeful that these combined efforts will pave the way for my future in forensic science.

Past Experience / Track Record

Throughout my high school journey, I have dedicated myself to academic excellence and community involvement, both of which I view as foundational for my future career in forensic science. My strong academic record, particularly in biology and chemistry, reflects my commitment to understanding the scientific principles that underpin forensic investigation. I consistently strive for a GPA of 3.8 or higher, as I believe this will prepare me for the rigor of a college curriculum focused on DNA analysis and criminal justice.

In addition to my academic pursuits, I have taken on leadership roles that have honed my skills in teamwork and communication. As president of the Crochet Club and Sign Language Club, I have organized events and fostered inclusive environments for my peers, emphasizing the importance of community and collaboration. My role as a section leader in the marching band has also instilled in me a strong sense of discipline and responsibility, qualities that I believe will be advantageous in my future studies and career. Through these experiences, I have gained valuable insights into leadership and service, which I am eager to apply in the field of crime scene investigation.

Unique Qualities

I possess a unique combination of academic excellence and leadership skills that sets me apart from my peers. My commitment to achieving a GPA of 3.8 or higher, especially in biology and chemistry, demonstrates my dedication to mastering the scientific principles essential for a successful career in forensic science. This strong academic foundation not only prepares me for the challenges of college but also fuels my passion for DNA analysis, crime scene investigation, and forensic pathology.

In addition to my academic pursuits, I actively engage in community service, which enhances my understanding of the criminal justice system. Serving as the president of the Crochet and Sign Language Clubs allows me to develop my leadership abilities while giving back to my community. As a section leader in the marching band, I cultivate teamwork and communication skills, vital assets in forensic science. My multilingual abilities further enhance my capacity to connect with diverse communities, making me well-prepared to contribute positively to the field of forensic science.

Collaboration Partners

In my journey towards becoming a forensic scientist, I have built a strong support system that includes my teachers, mentors, and fellow students. My biology and chemistry teachers have been instrumental in providing me with foundational knowledge and encouragement. They have guided me through challenging concepts and ignited my passion for the sciences. I often seek their advice on coursework and research opportunities, and their feedback has greatly enhanced my understanding and performance in these critical subjects.

Additionally, I benefit from my involvement in various clubs where I collaborate with peers who share similar interests. As president of the Crochet and Sign Language Clubs, I have developed leadership skills and a sense of community that enrich my life and work. Furthermore, I have the privilege of connecting with mentors in the field through community service initiatives focused on criminal justice. These experiences not only deepen my commitment to crime scene investigation but also allow me to build valuable relationships that support my aspirations as a future forensic scientist.

Sustainability Plan

After receiving assistance, I will sustain my academic progress by diligently managing my time and focusing on my studies in forensic science. I plan to create a structured schedule that allocates specific hours for coursework, laboratory practice, and supplementary learning through workshops and seminars. By staying organized and prioritizing my education, I will aim to achieve and maintain a GPA of 3.8 or higher, ensuring that I am well-prepared for a rigorous college curriculum. This discipline will be crucial as I deepen my understanding of DNA analysis and crime scene investigation.

In addition to my academic efforts, I will continue to develop my skills and make meaningful contributions to my community through volunteerism. My commitment to completing at least 50 hours of service with local organizations focused on criminal justice will allow me to gain practical experience, build valuable connections, and enhance my leadership capabilities. By actively engaging with professionals in the field and applying my classroom knowledge in real-world scenarios, I will transform my passion for forensic science into impactful actions that contribute positively to the criminal justice system.

Barriers & Challenges

Navigating my senior year as a high school student has presented several challenges that I continuously strive to overcome. Balancing rigorous coursework while pursuing college-level classes demands exceptional time management skills, which I work hard to cultivate. My commitment to my academic success is often tested by the added responsibility of assisting my grandparents, who do not speak English. This language barrier requires me to advocate for them and translate important information, all while maintaining my GPA of 3.81 and fulfilling my extracurricular commitments.

Moreover, my background as a second-generation immigrant has opened my eyes to the barriers that many in my community face regarding access to quality education and opportunities, especially in STEM fields. I feel a strong sense of responsibility to advocate for educational equity for those who, like me, encounter similar obstacles. As I navigate these challenges, I am motivated to create an inclusive environment in forensic science that not only benefits my future but also empowers those who may lack resources. I believe that by sharing my experiences, I can inspire others to pursue their passions despite the barriers they face.

Special Circumstances

Navigating my journey as a high school senior has been fraught with challenges that directly influence my aspirations in forensic science. Balancing the demands of rigorous coursework with the pursuit of college-level classes requires immense dedication and time management. I often find myself navigating not just my academic goals, but also the added responsibility of assisting my grandparents, who do not speak English. This language barrier further complicates my experience, as I strive to be an advocate and translator while maintaining my academic performance and extracurricular commitments.

These experiences have ignited my passion for educational equity, particularly for second-generation immigrants like myself. I understand the barriers that my community faces in accessing quality education and opportunities in STEM fields. By overcoming my own challenges, I am inspired to empower others facing similar obstacles. My commitment to fostering an inclusive environment in forensic science is driven by my

desire to uplift those who may not have the same resources, ensuring that the path I forge not only paves the way for my future but also creates opportunities for underserved populations in our society. Receives SSDI as the minor child of a parent who gets SSDI.
